# CSE141L Lab 2 Characterizing a Perceptron

Name:	Student ID:
Inst	ructions
	Complete this worksheet while reading/working through the lab write up. The worksheet doesn't make sense without the lab.
	The point values are listed for each question. Altering the size of the cells will cost you 1 point. There are 75 points total for the write up portion of the lab.
Enab	ling the Profiler
P1 (1p	t) Which function accounts for the most time?
A:	
P2 (1p	t) What percentage of time does it account for?
A:	
P3 (1p functio	t) According to Amdahl's Law, how much speedup could you possibly achieve by optimizing this on?
	Your work here

### Taking a Closer Look at the Code

P3 (1pt) We noticed that fc\_layer\_t::activate(tensor\_t const&) took 46.7% of the total execution time. If we speed up this function by 3x, how much will the total program be sped up by?

Your work here		

#### What's the Compiler Doing?

Ρ1	(1	pt)	How man	y instructions	does the	function	'point_t:	:point_t	t(int, int,	int)'	execute w	hen ca	alleď	?

A:	

### **Looking at Performance Counters**

P1 (4pt) Compute the instruction mix for each of the dataset and enter them below (as %)

Dataset	Memory insts	Branches	uncond. branches
mnist			
emnist			
cifar10			
cifar100			
imagenet			

P2 (4pt) Fill out the table (total data processed is the product of the model size and the number of training inputs)

Dataset	Model size (B)	training_inputs_count	total data processed	Memory ops
mnist				
emnist				
cifar10				
cifar100				
imagenet				

		f branches per byte of da		orkload.
